

53 Optical Module

Overview

The Yokogawa SNT401-53 Optical Bus Repeater Module extends the reach of ESB Bus networks by converting electrical signals to optical signals. As part of the STARDOM and CENTUM series safety and control systems, this module plays a critical role in converting electrical ESB bus signals into. Q: Which fiber types are supported by the SNT501-53 module?

A: Compatible with both single-mode and multi-mode fibers, suitable for various industrial optical fiber bus communication applications. It enables stable optical signal transmission across distances up to 10 km, depending on configuration. Whether you are creating a 100-Gbps or 400-Gbps, small form-factor pluggable (SFP) module, SFP+ transceiver, XFP module, CFP, X2/XENPAK module. This module is connected from ESB Bus Coupler Module (SEC401, SEC402) on the safety control unit or Optical ESB Bus RepeaterSlave Module on the safety node unit (SNB10D) through ESB Bus cable. Connection method: Star type.
