

Both the fiber optic cable and the router have green lights on

Overview

Blinking green/white: It happens when the router is starting up or updating firmware. Give it a few minutes to finish. The LEDs on your modem, optical network terminal (ONT), router, or modem/router combo (gateway) are most likely blinking because they're communicating what the device is doing, or there's an error. All networking devices, like modems and routers, provide a row of status lights that represent the. Learn what each light on your fiber equipment means—from power and fiber signal to Ethernet and phone service—and how to quickly troubleshoot issues. One of the key aspects of the ONT is the array of lights on its front. Modem and router lights show connection status, helping you identify normal activity, temporary transitions, or serious network issues. Understanding light colors and blinking patterns makes troubleshooting easier, saving time and reducing unnecessary calls to your internet provider.
