

Can Huijue optical modules be hot-swapped

Overview

A key advantage of SFP+ Modules is that they are "hot-swappable", meaning they can be swapped out while the router is still powered on. They also support multiple transmission media and protocols, enhancing flexibility and scalability. Hot swapping is also called power-on reseating or hot replacement. It refers to inserting or removing components such as main control boards, interface boards, and optical modules into or from a device without powering off the device. This is enabled by:
