

Core of Automatic Switch Control System

Overview

Switch control system, an automated control system, consists of switch devices, controllers and related equipment. It can control and regulate electrical equipment, mechanical devices or other systems by operating circuits through switches. It is generally composed of three parts: sensors, control units, and actuators. The automatic switch decides to switch on or off the circuit based. ABB is a technology leader that is driving the digital transformation of industries. With a history of innovation spanning more than 130 years, ABB has four customer focused, globally leading Businesses: Electrification, Industrial Automation, Motion, and Robotics & Discrete Automation, supported. In modern power systems, a reliable and efficient transfer of power between multiple sources is essential for providing uninterrupted electricity supply., utility grid) to a backup source (e. Once the main supply is restored, the ATS.
