

Distribution box finished terminal flexible wire

Overview

This electrical connection conductor consists of several rows or layers of tin-plated flat braided wires and has compression-molded terminals attached to both ends. The distribution blocks and device terminal blocks from the FIX block system are available ready to connect in different cross-sections, mounting types, and colors. This includes the following groups: With its compact Power Distribution Blocks, FTG offers a comprehensive assortment with a huge variety of solutions, regardless of whether sector-shaped conductors. Our flexible distribution boxes enable reliable, decentralised signal transmission and power transmission up to protection class IP67 – wherever passive distribution boxes are required. They are one-pole modular units with an interlocking dovetail feature that enables ganging of the blocks to create multi-pole configurations according to application requirements.
