

Fiber optic switches other switches

Overview

Control signal choices for fiber optic switches include RJ-45, RS232, RS422, and TTL. Common switch features include rack mountable and LED indicators. An important environmental parameter to consider for fiber optic switches is the operating temperature. Fiber optic switches can interface with two types of cables: 1. single mode 2. multimode. Single mode is an optical fiber that will allow only one mode to propagate. The fiber has a very small core diameter of approximately $8\text{ }\mu\text{m}$. It permits signal transmission at extremely high bandwidth and allows very long transmission distances. Multimode describes. Important switch performance parameters to consider when searching for fiber optic switches include: 1. wavelength range 2. number of input ports 3. number of output ports 4. switching time 5. insertion loss 6. polarization dependent loss 7. cross-talk 8. data rate 9. switching voltage. The wavelength range specifies the wavelength range the switch.
