

Grounding stake for construction site electrical distribution box

Overview

26 mm 2 (10 AWG) ground wire must be used, and in all other markets a 6 mm 2 must be used. When lightning strikes or a rogue voltage surge decides to crash the party, proper grounding steps in like a seasoned bouncer, redirecting danger away from. 1. 7 Provide conduit grounding bushings, bonded together and connected to the equipment enclosure on all incoming and outgoing conduits on distribution switchgear and switchboards, distribution panels and on all conduits over 1-1/4" diameter at all panelboards, pull boxes and equipment. The grounding system provides a low-impedance path for fault current and limits the voltage rise on the normally non-current-carrying metallic components of the electrical distribution system. Each DISTRIBUTION BOX and controller must be grounded. In order for the protective devices to function properly and to ensure the safety of the general public and all maintenance personnel, it is critical that the entire electrical ounding lugs or a mechanical connection.
