It is used in a terminal box to connect the optical fibers in the optical cable, and to connect the optical cable and the jumper through the terminal box coupler (adapter). Jumper Both ends of the jumper are movable connectors, which connect the pigtail and the device. A fiber pigtail is a specific hardware connection used for cable termination. Thus, a fiber termination box is used to terminate the optical fiber. A fiber termination box is the standard instrument used in fiber optic networks to connect, secure, and protect optical fibers at the terminating point. If you do not have relevant experience and skills, it is recommended to ask a professional to install it. Preparations: Before installation. Before you drill holes, strip cables, or set up the splice tray, take 2 minutes to confirm the exact box type you're working with. In practice, most buyers searching for a fttb fiber optic terminal.
