

How to share a router with fiber optic broadband

Overview

To set up your router for fiber internet quickly, connect the router to your fiber modem, access the router's settings via a web browser, and input the provided ISP credentials. Your router must have a Gigabit Ethernet WAN port to connect to the ONT. Routers designed for DSL (which uses phone line inputs) or cable (which uses coaxial inputs) won't work. Understanding compatibility, potential limitations, and when an upgrade is necessary will ensure you get the most out of your high-speed connection. This guide will break down everything you. I'm planning to use a TP-Link MC220L transceiver to convert the optical signal to ethernet. This ethernet will then go through a 1 Gbit/s switch, and route two ethernet cables to each floor. Make sure to update the firmware, configure Wi-Fi security, and customize your network name for optimal performance.
