

Huijue core switch unable to assign IP address

Overview

Start by connecting your Huawei switch to a console port using a serial cable or via SSH if remote access is already enabled. Once in the CLI, enter `system-view` to enter. To enable network devices to communicate at the network layer, configure interface IP addresses on the device. The interface view is displayed. ARP maps an IP address to a MAC address. ARP provides some extended functions, such as proxy ARP, gratuitous ARP, ARP security, and. Configuring an IP address on a Huawei switch isn't just a technical checkbox—it's the foundation of a reliable, responsive network. Exact commands and menus may vary by vendor and model, so refer to the switch manual or vendor configuration guide for device-specific details. Changing an IP address can disrupt network connectivity, so perform changes. Each IP address can be assigned to specified interfaces or ports, Link Aggregation Groups (LAGs), or Virtual Local Area Networks (VLANs).
