

Indoor grounding of the three-level distribution box

Overview

26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used. Grounding is a mechanism to protect distribution equipment and people under normal operating conditions, abnormal operational (overcurrent and overvoltage) responses, and hazardous conditions such as shocks. Grounding is necessary to assure correct operation of electrical devices, to assure safety. This Grounding Standard describes the technical requirements for grounding the SEC Distribution Network installations. SEC Distribution System extends from the MV (33 kV, 13.8 kV) feeder outlets of HV / MV Substations down to SEC Customer interface including KWH-Meters and meter boxes. Each DISTRIBUTION BOX and controller must be grounded. Whether you're a seasoned pro or just starting out, this comprehensive guide will give you practical. Abstract: System grounding considerations affect many aspects of an electrical system.
