

Intelligent Cabinet PDU Technical Specifications

Overview

Server Technology rack PDUs range from Smart to Switched and Monitored Per Outlet. Input power options include AC and DC, with input current from 16 Amps to 100 Amps, and voltages from -48VDC to 415V three-phase to deliver power capacity up to 57. These iPDUs monitor the data center power and environment (at the rack or cabinet level), by continuously scanning for electrical circuit overloads, and physical environmental conditions that place critical IT. You can distribute energy with the high-tech POWERGuard intelligent PDU which has a user-friendly interface for monitoring and managing the energy consumption of your data center cabinets. With the optional SmartPack. Rack PDUs that have the ability for aggregate power monitoring to quickly identify potential power issues, and reclaim available or under-utilised power capacity. Colo providers offer rack, power, cooling and access control solutions to allow their tenants to remotely monitor their IT. The new HPE Intelligent Power Distribution Unit (PDU) brings state of the art management and control to rack mounted PDUs to prevent over provisioning of power which may restrict growth in your data center. Using core and stick architecture, the HPE Intelligent PDU provides monitoring of power.
