

Internet Industry and New Energy

Overview

This study explores the complex interaction between the Internet of Things (IoT) and the new energy sector and analyzes how their integration can catalyze a transition toward a sustainable low-carbon economy. New, data-driven energy technology can optimize everything from grids and data centres to buildings and industry. As electrification, automation and digital intelligence converge, the energy landscape is transforming from linear, centralized systems to omni-directional, data-driven networks. This falls on a backdrop of the IoT's driving of efficiency around wind turbines and solar systems, which look set to represent the future of. China is accelerating the development of new energy sources due to growing environmental concerns and the need to reduce dependence on imported energy sources. Digital transformation can help industries improve efficiency and reduce costs.

Article Content

The Potential of Digital Business Models in the New Energy Economy

Energy companies continue to find novel ways of doing business and engaging with their customers. This article highlights the potential of digital business models to facilitate clean energy

Internet of Energy: Opportunities, applications, architectures and ...

Internet of Energy integration in the industry is focused to provide key requirements, applications, architecture frameworks and open challenges. The Internet of Energy (IoE) transforms

Why AI and energy are the new power couple – Analysis

Why AI and energy are the new power couple - A commentary by Vida Rozite, Jack Miller, Sungjin Oh

Research on Key Challenges and Technologies Ahead for Energy Internet ...

At present, net-zero carbon emission has become a global goal, which accelerates the energy transition to use more clean electricity generated by variable renewable energy (VER). Energy Internet is

The internet consumes extraordinary amounts of energy.

How much energy does the internet use, and - given recent technological advances - could it ever run on renewable energy alone?

EU Clean Energy Transition Conference | 5 March 2026

Discover how Europe can accelerate a secure and competitive clean energy transition, uniting policymakers, industry and innovators to deliver sustainable

Net-Zero Industry Tracker 2024 | World Economic Forum

The third edition of the Net-Zero Industry Tracker provides a detailed analysis of the progress hard-to-abate industrial and transport sectors are making

Powering the Internet with renewable energy

Second, we're driving the renewables industry forward by fully committing to renewable sources. In 2010, we entered our first large-scale renewable power purchase agreement with a wind

Digital technologies for a net-zero energy future: A comprehensive ...

The energy sector plays a vital role in achieving a sustainable net-zero future, and the adoption of advanced technologies such as AI, blockchain, qua

Integrating the IoT and New Energy to Promote a

This study explores the complex interaction between the Internet of Things (IoT) and the new energy sector and analyzes how their integration can

Energy Internet: Redefinition and categories

The concept of "Energy Internet" (EI) has been widely accepted by both academic and industry experts after more than a decade of development. Since it

CONCEPTS, TECHNOLOGIES, AND FUTURE PROSPECTS FOR

Supported by cutting-edge innovations like the Internet of Things, vehicle-to-grid, and blockchain, Energy Internet connects diverse energy resources including solar panels, wind turbines, batteries,

The State of Energy Innovation 2025 – Analysis

The analysis provides a data-driven foundation to inform policy makers, industry and other stakeholders on the state of energy innovation worldwide and

Digital Transformation in the New Energy Industry for Sustainable ...

The insights from this study provide helpful information for participants who wish to drive the digital transformation of the new energy industry and achieve sustainable growth in the new energy sector.

The Potential of Digital Business Models in the New Energy Economy

The pace of digitalisation in the energy sector has accelerated rapidly in recent years, leading to a transformation of many traditional business models. Thanks to innovative technologies

Digitalisation

Digitalisation – the application of digital technologies – could have a major effect on emissions as an enabler in accelerating clean energy transitions. Across the

IoT in energy: a comprehensive review of technologies, applications ...

The integration of IoT (Internet of Things) in the energy sector has the potential to transform the way it generates, distributes, and consumes energy. IoT can enable real-time

Digital Transformation: Shaping the Future of the Energy

Digital transformation is unlocking new potential in the energy sector, from optimized management and automation to fostering renewable energy

Internet of Energy: The New Energy Business Model

Here's what you need to know about the Internet of Energy. The three Ds - decarbonisation, decentralisation and digitisation - are transforming the

Executive summary – Energy and AI – Analysis

Based on a new global model and comprehensive dataset of data centre electricity demand, its analysis was also enriched by an in-depth process of consultation

Integrating Renewable Energy and Digital Infrastructure: Investment ...

This article looks at the increase in energy demand and the challenges and significant opportunities it presents for infrastructure investors over the coming decades.

Batteries boost the internet of everything: technologies and potential ...

Based on this notion, this article illustrates the contribution of batteries in improving the Internet of Everything under the rapidly evolving living habits.

Measuring the Emissions & Energy Footprint of the ICT

Reducing emissions from the rapidly expanding digital sector while expanding connectivity for those without internet access requires better data on energy

The Research of Development of New Energy Industrial Internet

There are various technical and management barriers in new energy monitoring, operation and maintenance, trading, on-demand manufacturing and other businesses.

Here are 5 reasons why we need an "Internet of Energy"

With the advent of the Internet of Things, these two revolutions are rapidly converging and will ultimately result in an "Internet of Energy".

Top 10 Energy Industry Trends | StartUs Insights

Explore the top 10 energy industry trends, covering green hydrogen, AI, nuclear growth, microgrids & top startups driving the transition.

Digitalization and Energy – Analysis

Digital technologies are everywhere, affecting the way we live, work, travel and play. Digitalisation is helping improve the safety, productivity, accessibility and

Energy and AI – Analysis

This report from the International Energy Agency (IEA) aims to fill this gap based on new global and regional modelling and datasets, as well as

Working towards a new era of data-driven energy

As electrification, automation and digital intelligence converge, the energy landscape is transforming from linear, centralized systems to omni

Energy and AI: the power couple that could usher in a

As the world embraces both technological innovation and environmental responsibility, the demand for clean, sustainable energy solutions
