

Is the fiber optic cable tray connected with a conduit

Overview

Installing the fiber inside protective tubing, known as conduit, is standard practice for any durable installation, ensuring the longevity and reliability of the connection. Indoor fiber cables should be placed in conduits or trays. Properly fiber rated fiber cables can use the same cable. The existing 2" conduit contains 4x 1/0 XLPE cable (rated for direct-burial), so I plan on pulling outdoor rated, non-metallic fiber through the same conduit. My original plan was to trench new conduit and run CAT8, but given that the existing run is all "customer side" and installed by the former. Outdoor cable may be direct buried, pulled or blown into conduit or innerduct, or installed aerially between poles. Project success depends on careful planning, precise installation practices, and proper. The purpose of this AE Note is to outline the use of fiber optic cables in "tray rated" environments.
