

Network cabling without cable trays

Overview

Structured cabling is a standardised approach to building a robust and scalable network cabling infrastructure. It connects everything, from data centres and telecom rooms to floor boxes and wall-mounted racks, in a way that keeps things tidy, efficient, and future-proof. Ladder rack (also known as “ladder trays” or “cable ladders”) are one of the most common types of cable runway. As the name suggests, they're constructed of two side rails connected by rungs, creating an open structure for cable support and management. Cables can enter and exit anywhere along the. Our latest office has cabling run all the walls in trunking, and rows of wall ports near the desks. Cable management is easier than you think. Keep. Networking and connectivity issues are now the leading cause of IT service-related outages (31% of incidents), according to the Uptime Institute's 2024 Resiliency Survey.
