

Power Fiber Optic Cable Testing Equipment

Overview

Our selection includes essential tools for measuring, testing, and ensuring the reliability of fiber optic networks. Fiber optic cable is a type of cabling that contains one or more optical fibers for transmitting data at high speeds and/or over long distances using light. These fibers are most commonly made of glass and are very thin, typically less than a tenth of the width of a human hair. Get pass/fail results in seconds. The tools that allow you to perform a comprehensive assessment on a fibre optic cable are fibre light sources, optical power meters and fibre optic. AFL designs test and inspection tools that are easy to use and provide quick results, without complicated training requirements. Using them consistently eliminates the #1 cause of network outages – dirty. Our Mini Pro OTDR is the perfect all-in-one handheld device for evaluating FTTx and access network construction and maintenance, identifying fiber breakpoints, measuring cable length, and calculating relative optical power losses. Our advanced OFC testing solutions are trusted worldwide by.
