

Pricing of Integrated Micro-Modular Data Center

Overview

A 2025 US development cost guide from Cushman & Wakefield reports facility construction costs clustering around \$9. 0M per MW of critical load across major US markets, with an average near \$11. A micro modular data center is a compact, pre-engineered IT infrastructure solution designed for edge computing, remote operations, and rapid deployment. Unlike traditional facilities, these units integrate power, cooling, security, and server racks into a single, scalable enclosure. Think of it as a “data center in a box”: it's factory-assembled, tested, and ready to deploy in hours. Modular Data Centers (MDCs) can solve those challenges in an economical, fast and energy-efficient manner. When built and implemented correctly, they can greatly contribute to sustainability goals. MDCs optimize time-to-market with their pre-fabrication and assembly process, significantly reducing. According to a 2024 report by Grand View Research, the global micro data center market is projected to grow at a CAGR of 17. 3% from 2024 to 2030, reaching a valuation of \$6.
