

Primary Optical Splitter in Communication Engineering

Overview

It is an optical fiber tandem device with many input and output terminals, especially applicable to a passive optical network (EPON, GPON, BPON, FTTX, FTTH etc. In the backbone of modern Fiber-to-the-Home (FTTH) networks, optical splitters serve as the unsung heroes that enable cost-efficient connectivity for millions of subscribers. The split ratio and insertion loss are two key parameters defining their performance. A deeper understanding of these. A fiber-optic splitter, also known as a beam splitter, is based on a quartz substrate of an integrated waveguide optical power distribution device, similar to a coaxial cable transmission system. It can distribute the optical energy transmitted through a single fiber to two or more fibers in a predetermined ratio or combine the optical energy from multiple fibers into one fiber. T PON standards such as GPON, XGS-PON and new 25 and 50G standards.
