

Protective fencing around the distribution box

Overview

Chain-link fencing: Provides a cost-effective solution with good visibility, making it easier for security personnel to monitor the area. Fencing around distribution centres helps control access and protect goods from theft, unauthorised entry, and potential disruptions. Distribution centres are an essential. FenceTrac manufactures modular fence systems for distribution centers, fulfillment facilities, and logistics hubs where the perimeter fence secures inventory flow, protects trailer staging areas, and screens high-volume dock operations from adjacent properties and public roads. Animal intrusion is one of the leading causes of substation and transformer damage, which results in costly lost productivity. However, not all security fencing is created equal. The fiberglass wall deters would-be vandals, excludes wildlife, and hides unsightly equipment from neighborhoods.
