

Sohokvm switcher hotkey settings

Overview

The default hotkey is set to "Tab," but you can easily switch it to another key like "Caps Lock" following these steps: Hold down "Ctrl" (Left Ctrl), "Alt," and "Shift" keys simultaneously, then press "[" (left square bracket) to enable or "]" (right square bracket) to disable. The default hotkey is set to "Tab," but you can easily switch it to another key like "Caps Lock" following these steps: Hold down "Ctrl" (Left Ctrl), "Alt," and "Shift" keys simultaneously, then press "[" (left square bracket) to enable or "]" (right square bracket) to disable. Pushing the KVM LED on the left of the button allows you to switch just your USB keyboard, video, and mouse to that connected computer. Pushing the Audio LED on the right of the button allows you to independently switch your audio feed while continuing to work off of a different computer. Maybe someone can help me out ?

Looking at the manual, it appears there's two different ways to use the hotkeys: - the default would be to hold Ctrl+Shift and press the number for the relevant device. The KVM switch features hot keys that allow you to select ports using designated key commands. It also includes an AutoScan feature that automatically scans and monitors the activities of all connected computers. The KVM switch has a video resolution of up to 2048×1536@85Hz and requires 75-Ohm. With hotkeys enabled (by default), you can switch between connected PCs with just a few keystrokes, eliminating the need to reach for buttons. AV Access KVM switches take hotkey functionality to the next level with innovative design features. The cables are also smaller and easier to manage. One indicates which port the KVM is on and the other. Using the KVM Switch To modify the hot-key preceding sequence from the default Scroll Lock, you can either hit the hot-key sequence: scrlk - scrlk - H - (y), y = SCROLL LOCK, CAPS, ESC, F12, LEFT_CTRL, RIGHT_CTRL, or NUM LOCK (as detailed in the Hot Key Quick Reference Table below).
