

Standard Requirements for Single-Mode Fiber Optic Engineering Deployment

Overview

163 describes criteria for the installation of optical fibre cables defined in Recommendation ITU-T L. 110 in remote areas with lack of usual infrastructure for installation including the procedures of cable-route planning, cable selection, cable-installation. All three fiber types are characterized as “ low-water peak ”, meaning the maximum attenuation requirement at 1383 nm is equivalent to the maximum attenuation specified at 1310 nm. This constraint eliminates the concern that the fiber will have high loss in the 1360 nm to 1460 nm band caused by OH. The Fiber Optic Association, Inc. This document includes the background information necessary for a successful installation. 3cu™, IEEE Draft Standard for Ethernet Amendment: Physical Layers and Management Parameters for 100 Gb/s and 400 Gb/s Operation over Single-Mode Fiber at 100 Gb/s per Wavelength, marks the third time the IEEE 802.
