

What is the preset key on a fiber optic sensor

Overview

Use the arrow keys to select “ADVANCE”, then press the Mode Key. Hold down the Mode Key for 3 second or more to complete the settings. The FS-V31 is a digital, single-control fiber optic sensor designed for industrial applications, featuring NPN output and selectable Light-ON/Dark-ON operation. Please read this manual thoroughly before installation. Press and hold the and buttons simultaneously for three seconds. The optical fiber consists of the core and the cladding, which have different refractive indexes. 0”, setting value becomes. Radiation absorption excites an orbital electron to a higher energy level. Heating the material enables the trapped states to interact with phonons and decay into lower-energy. What is a Fiber Optic Sensor?

A fiber optic sensor measures a physical quantity by modulating the intensity, spectrum, phase, or polarization of light traveling through the optical fiber system.
