Workshop Cable Tray Load-Bearing Test

Overview

The bearing capacity is the most basic testing item for the quality of the cable tray. The load-bearing test is also called the SWL (safe working load) test, which is to test the bearing capacity of the cable tray according to the standards of the International Electrotechnical. Cable tray load testing ensures your trays can hold the weight without bending or breaking. This is critical for safety, ensuring your electrical and data cabling systems. Cable trays play a vital role in supporting electrical cables and wires in commercial, industrial, and utility installations. For proper installation, design, and maintenance, adherence to international standards is essential. The. Machine Translated by Google WORK INSTRUCTIONS LOAD TEST CABLE TRAY & CABLE LADDER BASED ON IEC 61537 1. It applies to cable tray systems and cable ladder systems designed for the support and accommodation of cables and possibly other electrical equipment in installations.
